

HARVARD NEWS

"Indeed, the Spitzer scandal underscores just how much we need to take the revamping of HUCEP seriously," continued Faust. "If we don't want JohnstonGate to turn into just another FuckGate, at the very least, we must match the quality of escort services at the other Ivy League institutions."

While Harvard students can only reserve escorts by phone, Princeton is known to have a streamlined online reservation process, similar to the successful Netfuxxx business model, which had not yet been implemented when Spitzer was an undergrad there. Brown and UPenn also have secure and professional escort websites, modeled closer to the BLOCKBUSTIER paradigm, as escorts

can be conveniently returned directly to an on campus brothel the following morning, with NO LATE FEES! At Harvard, students can't even term bill their HUCEP uses, and often have to fill out tedious paper forms the morning after. Many Harvard students also balk at the hefty \$5,000 per use price tag, citing Yale and Columbia's much more generous escort financial aid packages. Dartmouth's escort service is known to be so discreet that its existence was only recently inferred by MIT scientists who used detailed observations from the now defunct Spitzer space telescope to prove that there is absolutely nothing else to do in Hanover, New Hampshire. Lead scientist Max Darkmark also used the data to discover a nacent prostitution ring around a young stellar object, the subject of recent Nature article.

Another much cited problem with HUCEP has been the frequent inability of its escorts to fulfill their responsibilities, despite the lucrative \$5,000 nightly fee, which is split 50/50 between HUCEP and the escort. A major issue is the structure of the

system, explained Harvard cognitive psychologist Stephen Pinker, chair of the new HUCEP restructuring committee. "If a man solicits a female escort, for example, he is responsible for paying for dinner, but at the end of the night, she gets to decide whether to actually escort him home. With a ridiculous set up like this, you often get a girl squeezing out ten nookie-free dinners before HUCEP wisely gives them the pink slip. Despite the seemingly unturndownable lure of a \$2,500 payoff, this is exactly this kind of inefficiency that has plagued the program for years."

Similar problems have been reported with male escorts, who often only escort female students for a couple of minutes, not nearly enough time for the girl to get to the place she really needs to get to. "Mandy Goldbergstein-Huntington III, '09, a frequent HUCEP user, complained to HSP, "These guys are nice and all, but for a third of my weekly allowance, I expect them to make a bigger effort to go down on my behalf anywhere I need in the middle of the night. Sometimes, they treat it so casually, just like taking you from point A to point B. And when its done, they usually split at the first opportunity, provided that they haven't fallen asleep before I'm even "there" yet."

Faust agrees. "If our highly expensive escorts can't satisfy you, don't even put out, or, god forbid, won't allow you to snort coke off of their private parts at your pleasure, then our students are clearly being exposed to a disservice. Indeed, if the Eliot Spitzer scandal has taught us anything, it's that Harvard students deserve the very best escort service we can offer, at more reasonable prices, without any of the inconvenient political repercussions. While I am optimstic about the future of HUCEP, I must admit that in its current state, the quality of our services is frankly scandalous."

"SCHOLARS BELIEVE THIS IS VERY CLOSE TO WHAT JOHN HARVARD MIGHT HAVE LOOKED LIKE"

Mike Huckabee Warns of Declining Stork Population, Extinction of Human Race

By Mike Huckabee

LITTLE ROCK, ARKANSAS

My fellow Americans. Now I'm a simple man. I'm not one of those over-brained, secular Harvard types who don't have the fortitude to see God's truth, but I'm not the dullest nail in the shed either. And when I see a problem, a real problem, a problem that poses a grave threat not just to good,

Christian Americans, but to the entire world, then by God, I feel a compulsion to act that supersedes any sort of partisanship or misguided nationalism. This isn't about Democrats or Republicans, Americans and Foreigners, or even Christians and God-Hating Liberals. It's about people. And its about saving a very special, very endangered, river dwelling non-migrant bird before its too late for all of us.

Yes, you heard me. This could be the end of days. As much as I'm secure with where I'll be headed when the rapture comes, I fear it might go against God's plan to prematurely end this wonderful human story due to something we ourselves can prevent — through science. With all this hoopla about global warming, nuclear war, and the quagmire in Iraq, the public has totally overlooked an inconvenient truth bigger than all of those put together.

And I'm not even talking about gay terrorists threatening to undermine the sanctity of marriage. I'm not just talking about bequeathing a world we aren't proud of to our descendants. I'm talking about a world with no descendants! Thankfully, there is a way to forestall this tragedy, by putting our best minds to work and trusting in the Lord to allow us to raise the stork population back to acceptable levels before we see the end to the miracle of birth itself.

It is no surprise that Wood Storks (*Mycteria Americana*) are monogamous, faithful birds that pair during a breeding season and raise their offspring together. The time of breeding depends on weather conditions, food supplies, appropriate nesting sites, and seasonal changes in water level. In dryer weather, when the water level is low, fish gather in small ponds in abundance, giving storks an easily accessible source of protein and nutrients. However, climate change and increased human encroachment into

their habitats has significantly disrupted the natural stork life cycle, and paradoxically, threatened our very existence. I've even heard of tales — God help us — of humans hunting and actually eating storks! If these cannibals aren't doing the devil's work on Earth, I don't know who is, except maybe the devil, who is among us, and is named Barak Obama.

Chuck Norris Now Available to Stand Behind You at Press Conferences

Now, while I *am* placing special emphasis on the problem, I'm not claiming to be the messenger of any unprecedented revelation here.

Indeed, scientists have been struggling with this problem for years. In 1999, workers at Ouachita Baptist University, my own *alma mater*, tried using pelicans, but failed to produce even a single human infant. Biologists at Bob Jones university, in an ingenious 2003 effort, succeeded in grafting stork genes onto the hummingbird. Unfortunately, all the babies turned out to be liberals with rapid heartbeats. As several eminent scholars at Southwestern Baptist Theological Seminary have pointed out, if the storks die out, we might all have to resort to begatting. And God knows, *nobody* wants that.

And its not just the birds that are in trouble. Evidently North American honey bee populations are also declining. You see, its all connected. I once had an atheist friend of mine — yes, some of my best friends are atheists — ask me pointedly how bees or birds themselves made babies. I can't tell you how hard it was to hold back my pity for the young woman as I patiently explained to her that they simply used very small storks. Despite her ignorance of the ways of the divine, the aha experience I witnessed in her eyes as she finally saw the truth made it all worth it.

While President Bush acted in good conscience when he limited the number of stem cell lines eligible for federal funding, as Vice President, I may be forced to make some difficult choices on that issue. Although abortion is murder, as I understand it, stem cells may be our only hope if we wish to support mass cloning of storks, or search for a viable alternative avian species (for example, the Blue-footed booby or the American flamingo). As my thinking has evolved, I've already begun drafting bipartisan legislation to allow us to move forward on this morally challenging, but undeniably crucial issue. Ten years ago, if you had said, "Mike, I'll bet you'll find a way to unite conservative, right wing fundamentalists and morally bankrupt environmentalists in common cause," I'd have said fiddlesticks! But there's nothing like an impending disaster to reveal the full cooperative potential of the human spirit.

As the stewards of God's creation, we must work hard to fulfill the obligation the Lord has thrust upon us. From the fleet Easter Bunny to the majestic Arctic Reindeer, all of God's species are precious, especially us, and especially storks, without whom we would have long since perished since we couldn't have babies otherwise. In these troubled times, by the power of Jesus and through the kindness of God Almighty, I have faith that, united, we shall find fundamental salvation for the winged bedrock of the human reproductive process.

Unless We Act Now, Its Huck-a-bye, Baby
